

setRelativeToleranceQuadratures

setupB

applyQuadTolerancesASA

```
graph LR; A[setRelativeToleranceQuadratures] --> C[applyQuadTolerancesASA]; B[setupB] --> C;
```

The diagram illustrates a process flow where two separate inputs, 'setRelativeToleranceQuadratures' and 'setupB', are combined and then processed by 'applyQuadTolerancesASA'. The first input is in a white box, the second is in a smaller white box, and the final output is in a gray box. Arrows indicate the direction of flow from left to right.
