

setRelativeToleranceQuadratures

setupB

applyQuadTolerancesASA

```
graph LR; A[setRelativeToleranceQuadratures] --> C[applyQuadTolerancesASA]; B[setupB] --> C;
```

The diagram illustrates the dependencies of the 'applyQuadTolerancesASA' function. It is represented as a rectangular box with a light gray fill and a black border. Two arrows, colored dark blue, point towards this box from the left. The top arrow originates from a white rectangular box labeled 'setRelativeToleranceQuadratures'. The bottom arrow originates from a smaller white rectangular box labeled 'setupB'. The arrows converge on the left side of the 'applyQuadTolerancesASA' box, indicating that both functions are prerequisites for its execution.
