## 1 AMICI 0.1 General Documentation

### 1.1 Introduction

AMICI is a MATLAB interface for the [SUNDIALS](#) solvers CVODES (for ordinary differential equations) and IDAS (for algebraic differential equations). AMICI allows the user to specify differential equation models in terms of symbolic variables in MATLAB and automatically compiles such models as .mex simulation files. In contrast to the SUNDIALSTB interface, all necessary functions are transformed into native C code, which allows for a significantly faster numerical integration. Beyond forward integration, the compiled simulation file also allows for first and second order forward sensitivity analysis, steady state sensitivity analysis and adjoint sensitivity analysis for likelihood based output functions.

The interface was designed to provide routines for efficient gradient computation in parameter estimation of biochemical reaction models but is also applicable to a wider range of differential equation constrained optimization problems.

### 1.2 Availability

The sources for AMICI are accessible as

- Source [tarball](#)
- Source [zipball](#)
- GIT repository on [github](#)

Once you've obtained your copy check out the [Installation](#)

### 1.2.1 Obtaining AMICI via the GIT versioning system

In order to always stay up-to-date with the latest AMICI versions, simply pull it from our GIT repository and recompile it when a new release is available. For more information about GIT checkout their [website](#)

The GIT repository can currently be found at <https://github.com/FFroehlich/AMICI> and a direct clone is possible via

```
git clone https://github.com/FFroehlich/AMICI.git AMICI
```

### 1.2.2 License Conditions

This software is available under the [BSD license](#)

Copyright (c) 2015, Fabian Fröhlich and Jan Hasenauer All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE COPYRIGHT HOLDER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

## 1.3 Installation

If AMICI was downloaded as a zip, it needs to be unpacked in a convenient directory. If AMICI was obtained via cloning of the git repository, no further unpacking is necessary.

To use AMICI, start MATLAB and add the AMICI directory to the MATLAB path. To add all toolbox directories to the MATLAB path, execute the matlab script

```
installToolbox.m
```

To store the installation for further MATLAB session, the path can be saved via

```
savepath
```

For the compilation of .mex files, MATLAB needs to be configured with a working C compiler. The C compiler needs to be installed and configured via:

```
mex -setup c
```

For a list of supported compilers we refer to the mathworks documentation: [mathworks.de](http://mathworks.de)

The tools SUNDIALS and SuiteSparse shipped with AMICI do **not** require further installation.

AMICI uses the following packages from SUNDIALS:

**CVODES:** the sensitivity-enabled ODE solver in SUNDIALS. Radu Serban and Alan C. Hindmarsh. *ASME 2005 International Design Engineering Technical Conferences and Computers and Information in Engineering Conference*. American Society of Mechanical Engineers, 2005. [PDF](#)

## IDAS

AMICI uses the following packages from SuiteSparse:

**Algorithm 907: KLU**, A Direct Sparse Solver for Circuit Simulation Problems. Timothy A. Davis, Ekanathan Palamadai Natarajan, *ACM Transactions on Mathematical Software*, Vol 37, Issue 6, 2010, pp 36:1 - 36:17. [PDF](#)

**Algorithm 837: AMD**, an approximate minimum degree ordering algorithm, Patrick R. Amestoy, Timothy A. Davis, Iain S. Duff, *ACM Transactions on Mathematical Software*, Vol 30, Issue 3, 2004, pp 381 - 388. [PDF](#)

**Algorithm 836: COLAMD**, a column approximate minimum degree ordering algorithm, Timothy A. Davis, John R. Gilbert, Stefan I. Larimore, Esmond G. Ng *ACM Transactions on Mathematical Software*, Vol 30, Issue 3, 2004, pp 377 - 380. [PDF](#)

## 2 Model Definition & Simulation

In the following we will give a detailed overview how to specify models in AMIWRAP and how to call the generated simulation files.

### 2.1 Model Definition

This guide will guide the user on how to specify models in MATLAB. For example implementations see the examples in the example directory.

#### 2.1.1 Header

The model definition needs to be defined as a function which returns a struct with all symbolic definitions and options.

```
function [model] = example_model_syms()
```

#### 2.1.2 Options

Set the options by specifying the respective field of the modelstruct

```
model.(fieldname) = (value)
```

The options specify default options for simulation, parametrisation and compilation. All of these options are optional.

field	description	default
.atol	absolute integration tolerance	1e-8
.rtol	relative integration tolerance	1e-8
.maxsteps	maximal number integration steps	1e4
.param	parametrisation 'log'/'log10'/'lin'	'lin'
.debug	flag to compile with debug symbols	false
.forward	flag to activate forward sensitivities	true
.adjoint	flag to activate adjoint sensitivities	true

When set to true, the fields 'noforward' and 'noadjoint' will speed up the time required to compile the model but also disable the respective sensitivity computation.

#### 2.1.3 States

Create the respective symbolic variables. The name of the symbolic variable can be chosen arbitrarily.

```
syms state1 state2 state3
```

Create the state vector containing all states:

```
x = [ state1 state2 state3 ];
```

#### 2.1.4 Parameters

Create the respective symbolic variables. The name of the symbolic variable can be chosen arbitrarily. Sensitivities **will be derived** for all parameters.

```
syms param1 param2 param3 param4 param5 param6
```

Create the parameters vector

```
p = [ param1 param2 param3 param4 param5 param6 ];
```

#### 2.1.5 Constants

Create the respective symbolic variables. The name of the symbolic variable can be chosen arbitrarily. Sensitivities with respect to constants **will not be derived**.

```
syms const1 const2
```

Create the parameters vector

```
k = [ const1 const2 ];
```

#### 2.1.6 Differential Equation

For time-dependent differential equations you can specify a symbolic variable for time. This **needs** to be denoted by t.

```
syms t
```

Specify the right hand side of the differential equation f or xdot

```
xdot(1) = [ const1 - param1*state1 ];
xdot(2) = [ +param2*state1 + dirac(t-param3) - const2*state2 ];
xdot(3) = [ param4*state2 ];
```

or

```
f(1) = [ const1 - param1*state1 ];
f(2) = [ +param2*state1 + dirac(t-param3) - const2*state2 ];
f(3) = [ param4*state2 ];
```

The specification of f or xdot may depend on [States](#), [Parameters](#) and [Constants](#).

For DAEs also specify the mass matrix.

```
M = [1, 0, 0;...
0, 1, 0;...
0, 0, 0];
```

The specification of  $M$  may depend on parameters and constants.

For ODEs the integrator will solve the equation  $\dot{x} = f$  and for DAEs the equations  $M \cdot \dot{x} = f$ . AMICI will decide whether to use CVODES (for ODEs) or IDAS (for DAEs) based on whether the mass matrix is defined or not.

In the definition of the differential equation you can use certain symbolic functions. For a full list of available functions see [symbolic\\_functions.c](#).

Dirac functions can be used to cause a jump in the respective states at the specified time-point. This is typically used to model injections, or other external stimuli. Spline functions can be used to model time/state dependent response with unknown time/state dependence.

### 2.1.7 Initial Conditions

Specify the initial conditions. These may depend on [Parameters](#) or [Constants](#) and must have the same size as  $x$ .

```
x0 = [ param4, 0, 0 ];
```

### 2.1.8 Observables

Specify the observables. These may depend on [Parameters](#) and [Constants](#).

```
y(1) = state1 + state2;
y(2) = state3 - state2;
```

In the definition of the observable you can use certain symbolic functions. For a full list of available functions see [symbolic\\_functions.c](#). Dirac functions in observables will have no effect.

### 2.1.9 Events

Specifying events is optional. Events are specified in terms of a trigger function, a bolus function and an output function. The roots of the trigger function defines the occurrences of the event. The bolus function defines the change in the state on event occurrences. The output function defines the expression which is evaluated and reported by the simulation routine on every event occurrence. The user can create events by constructing a vector of objects of the class [amievent](#).

```
event(1) = amievent(state1 - state2, 0, []);
```

Events may depend on [States](#), [Parameters](#) and [Constants](#) but **not** on [Observables](#)

### 2.1.10 Standard Deviation

Specifying of standard deviations is optional. It only has an effect when computing adjoint sensitivities. It allows the user to specify standard deviations of experimental data for [Observables](#) and [Events](#).

Standard deviation for observable data is denoted by `sigma_y`

```
sigma_y(1) = param5;
```

Standard deviation for event data is denoted by `sigma_t`

```
sigma_t(1) = param6;
```

Both `sigma_y` and `sigma_t` can either be a scalar or of the same dimension as the [Observables](#) / [Events](#) function. They can depend on time and [Parameters](#) but must not depend on the [States](#) or [Observables](#). The values provided in `sigma_y` and `sigma_t` will only be used if the value in `Sigma_Y` or `Sigma_T` in the user-provided data struct is NaN. See [Model Simulation](#) for details.

### 2.1.11 Attach to Model Struct

Eventually all symbolic expressions need to be attached to the model struct.

```
model.sym.x = x;
model.sym.k = k;
model.sym.event = event;
model.sym.xdot = xdot;
% or
model.sym.f = f;
model.sym.M = M; %only for DAEs
model.sym.p = p;
model.sym.x0 = x0;
model.sym.y = y;
model.sym.sigma_y = sigma_y;
model.sym.sigma_t = sigma_t;
```

## 2.2 Model Compilation

The model can then be compiled by calling `amiwrap`:

```
amiwrap(modelname,'example_model_syms',dir,o2flag)
```

Here `modelname` should be a string defining the modelname, `dir` should be a string containing the path to the directory in which simulation files should be placed and `o2flag` is a flag indicating whether second order sensitivities should also be compiled. The user should make sure that the previously defined function 'example\_model\_syms' is in the user path. Alternatively, the user can also call the function 'example\_model\_syms'

```
[model] = example_model_syms()
```

and subsequently provide the generated struct to `amiwrap()`, instead of providing the symbolic function:

```
amiwrap(modelname,model,dir,o2flag)
```

In a similar fashion, the user could also generate multiple model and pass them directly to `amiwrap()` without generating respective model definition scripts.

See also

[amiwrap\(\)](#)

## 2.3 Model Simulation

After the call to `amiwrap()` two files will be placed in the specified directory. One is a `am_modelname.mex` and the other is `simulate_modelname.m`. The mex file should never be called directly. Instead the MATLAB script, which acts as a wrapper around the .mex simulation file should be used.

The `simulate_modelname.m` itself carries extensive documentation on how to call the function, what it returns and what additional options can be specified. In the following we will give a short overview of possible function calls.

### 2.3.1 Integration

Define a time vector:

```
t = linspace(0,10,100)
```

Generate a parameter vector:

```
theta = ones(6,1);
```

Generate a constants vector:

```
kappa = ones(2,1);
```

Integrate:

```
sol = simulate_modelname(t,theta,kappa,[],options)
```

The integration status will be indicated by the sol.status flag. Negative values indicated failed integration. The states will then be available as sol.x. The observables will then be available as sol.y. The events will then be available as sol.root. If no event occurred there will be an event at the end of the considered interval with the final value of the root function stored in sol.rval.

Alternatively the integration call also be called via

```
[status,t,x,y] = simulate_modelname(t,theta,kappa,[],options)
```

The integration status will be indicated by the status flag. Negative values indicated failed integration. The states will then be available as x. The observables will then be available as y. No event output will be given.

### 2.3.2 Forward Sensitivities

Define a time vector:

```
t = linspace(0,10,100)
```

Generate a parameter vector:

```
theta = ones(6,1);
```

Generate a constants vector:

```
kappa = ones(2,1);
```

Set the sensitivity computation to forward sensitivities and Integrate:

```
options.sensi = 1;
options.forward = true;
sol = simulate_modelname(t,theta,kappa,[],options)
```

The integration status will be indicated by the sol.status flag. Negative values indicated failed integration. The states will then be available as sol.x, with the derivative with respect to the parameters in sol.sx. The observables will then be available as sol.y, with the derivative with respect to the parameters in sol.sy. The events will then be available as sol.root, with the derivative with respect to the parameters in sol.sroot. If no event occurred there will be an event at the end of the considered interval with the final value of the root function stored in sol.rootval, with the derivative with respect to the parameters in sol.srootval

Alternatively the integration call also be called via

```
[status,t,x,y,sx,sy] = simulate_modelname(t,theta,kappa,[],options)
```

The integration status will be indicated by the status flag. Negative values indicated failed integration. The states will then be available as x, with derivative with respect to the parameters in sx. The observables will then be available as y, with derivative with respect to the parameters in sy. No event output will be given.

### 2.3.3 Adjoint Sensitivities

Define a time vector:

```
t = linspace(0,10,100)
```

Generate a parameter vector:

```
theta = ones(6,1);
```

Set the sensitivity computation to adjoint sensitivities:

```
options.sensi = 1;
options.adjoint = true;
```

Define Experimental Data:

```
D.Y = [NaN(1,2)],ones(length(t)-1,2)];
D.Sigma_Y = [0.1*ones(length(t)-1,2),NaN(1,2)];
D.T = ones(1,1);
D.Sigma_T = NaN;
```

The NaN values in Sigma\_Y and Sigma\_T will be replaced by the specification in [Standard Deviation](#). Data points with NaN value will be completely ignored.

Generate a constants vector:

```
kappa = ones(2,1);
```

Integrate:

```
sol = simulate_modelname(t,theta,kappa,D,options)
```

The integration status will be indicated by the sol.status flag. Negative values indicated failed integration. The log-likelihood will then be available as sol.llh and the derivative with respect to the parameters in sol.sllh. Notice that for adjoint sensitivities no state, observable and event sensitivities will be available. Yet this approach can be expected to be significantly faster for systems with a large number of parameters.

### 2.3.4 Steady State Sensitivities

This will compute state sensitivities according to the formula  $s_k^x = -\left(\frac{\partial f}{\partial x}\right)^{-1} \frac{\partial f}{\partial \theta_k}$

In the current implementation this formulation does not allow for conservation laws as this would result in a singular Jacobian.

Define a final timepoint t:

```
t = 100
```

Generate a parameter vector:

```
theta = ones(6,1);
```

Generate a constants vector:

```
kappa = ones(2,1);
```

Set the sensitivity computation to steady state sensitivities:

```
options.sensi = 1;
options.ss = 1;
```

Integrate:

```
sol = simulate_modelname(t,theta,kappa,D,options)
```

The states will then be available as `sol.x`, with the derivative with respect to the parameters in `sol.sx`. The observables will then be available as `sol.y`, with the derivative with respect to the parameters in `sol.sy`. Notice that for steady state sensitivities no event sensitivities will be available. For the accuracy of the computed derivatives it is essential that the system is sufficiently close to a steady state. This can be checked by examining the right hand side of the system at the final time-point via `sol.xdot`.

## 3 Examples

In this section we include multiple examples on defining and simulating models.

[Example 1](#) : Forward Sensitivities for model with events and discontinuities.

[Example 2](#) : Forward Sensitivities for mRNA transfection model with bolus injection.

[Example 3](#) : Steady State Sensitivities.

[Example 4](#) : Adjoint Sensitivities for JAK/STAT model with parametric standard deviation.

[Example 5](#) : Adjoint Sensitivities for mRNA transfection model with bolus injection.

[Example 6](#) : Adjoint Sensitivities for simple model with analytic solution.

### 3.1 Example 1

#### 3.1.1 Model Definition

```
function [model] = example_model_1_syms()
```

#### CVODES OPTIONS

```
% set the default absolute tolerance
model.atol = 1e-8;
% set the default relative tolerance
model.rtol = 1e-8;
% set the default maximum number of integration steps
model.maxsteps = 1e4;
% set the parametrisation of the problem options are 'log', 'log10' and
% 'lin' (default).
model.param = 'log10';
```

#### STATES

```
% create state syms
syms x1 x2 x3

% create state vector
x = [
x1 x2 x3
];
```

#### PARAMETERS ( for these sensitivities will be computed )

```
% create parameter syms
syms p1 p2 p3 p4

% create parameter vector
p = [p1,p2,p3,p4];
```

CONSTANTS ( for these no sensitivities will be computed ) this part is optional and can be omitted

```
% create parameter syms
syms k1 k2 k3 k4

% create parameter vector
k = [k1 k2 k3 k4];
```

## SYSTEM EQUATIONS

```
% create symbolic variable for time
syms t

xdot = sym(zeros(size(x)));

% piecewise defined function
xdot(1) = -p1*heaviside(t-p4)*x1;
% inhomogeneous
xdot(2) = +p2*x1*exp(-0.1*t)-p3*x2 ;
xdot(3) = -1.5*x3;
```

## INITIAL CONDITIONS

```
x0 = sym(zeros(size(x)));

x0(1) = k1;
x0(2) = k2;
x0(3) = k3;
```

## OBSERVALES

```
y = sym(zeros(1,1));

y(1) = p4 * (x1+x2+x3);
```

EVENTS this part is optional and can be omitted

```
syms t

% events fire when there is a zero crossing of the root function
event(1) = amievent(x3-x2,0,t);
event(2) = amievent(x3-x1,0,t);
```

## SYSTEM STRUCT

```
model.sym.x = x;
model.sym.k = k;
model.sym.xdot = xdot;
model.sym.p = p;
model.sym.x0 = x0;
model.sym.y = y;
model.event = event;

end

ans =
    atol: 1e-08
    rtol: 1e-08
  maxsteps: 10000
    param: 'log10'
      sym: [1x1 struct]
    event: [1x2 amievent]
```

### 3.1.2 Simulation

```
clear
close all
clc
```

#### COMPILATION

```
[exdir,~,~]=fileparts(which('example_model_1.m'));
% compile the model
amiwrap('model_example_1','example_model_1_syms',exdir)
% add the model to the path
addpath(genpath([strrep(which('amiwrap.m'),'amiwrap.m','') 'models/model_example_1']))
```

```
Generating model struct ...
Parsing model struct ...
```

```
Error using amifun/getSyms
Too many output arguments.

amiwrap('model_example_1','example_model_1_syms',exdir)
```

#### SIMULATION

```
% time vector
t = linspace(0,10,20);
p = [0.5;2;0.5;0.5];
k = [4,8,10,4];

options.sensi = 0;
options.ccode_maxsteps = 1e6;
options.nmaxevent = 2;
% load mex into memory
sol = simulate_model_example_1(t,log10(p),k,[],options);

tic
sol = simulate_model_example_1(t,log10(p),k,[],options);
disp(['Time elapsed with ccodes: ' num2str(toc) ])
```

#### ODE15S

```
ode_system = @(t,x,p,k) [-p(1)*heaviside(t-p(4))*x(1);
    +p(2)*x(1)*exp(-0.1*t)-p(3)*x(2);
    -1.5*x(3)];
% event_fn = @(t,x) [x(3) - x(2);
%     x(3) - x(1)];
% 'Events',event_fn
options_ode15s = odeset('RelTol',1e-8,'AbsTol',1e-8,'MaxStep',1e4);

tic
[~, X_ode15s] = ode15s(@(t,x) ode_system(t,x,p,k),t,k(1:3),options_ode15s);
disp(['Time elapsed with ode15s: ' num2str(toc) ])
```

#### PLOTTING

```
figure
c_x = get(gca,'ColorOrder');
```

```

subplot(2,2,1)
for ix = 1:size(sol.x,2)
    plot(t,sol.x(:,ix),'.-','Color',c_x(ix,:))
    hold on
    plot(t,X_ode15s(:,ix),'d','Color',c_x(ix,:))

## 4 Code Organization

In the following we will briefly outline what happens when a model is compiled. For a more detailed description we refer the reader to the documentation of the individual functions.

After specifying a model (see [Model Definition](#)) the user will typically compile the model by invoking [amiwrap\(\)](#). [amiwrap\(\)](#) first instantiates an object of the class [amimodel](#). The properties of this object are initialised based on the user-defined model. If the `o2flag` is active, all subsequent computations will also be carried out on the augmented system, which also includes the equations for forward sensitivities. This allows the computation of second order sensitivities in a forward-forward approach. A forward-adjoint approach will be implemented in the future.

The fun fields of this object will then be populated by [amimodel::parseModel\(\)](#). The [amimodel::fun](#) field contains all function definitions of type [amifun](#) which are required for model compilation. The set of functions to be considered will depend on the user specification of the model fields [amimodel::adjoint](#) and [amimodel::forward](#) (see [Options](#)) as well as the employed solver (CVODES or IDAS, see [Differential Equation](#)). For all considered functions [amimodel::parseModel\(\)](#) will check their dependencies via [amimodel::checkDeps\(\)](#). These dependencies are a subset of the user-specified fields of [amimodel::fun](#) (see [Attach to Model Struct](#)). [amimodel::parseModel\(\)](#) compares the hashes of all dependencies against the [amimodel::HTable](#) of possible previous compilations and will only compute necessary symbolic expressions if changes in these fields occurred.

For all functions for which [amimodel::fun](#) exists, [amimodel::generateC\(\)](#) will generate C files. These files together with their respective header files will be placed in `$AMICIDIR/models/modelname`. [amimodel::generateC\(\)](#) will also generate `wrapfunctions.h` and `wrapfunctions.c`. These files define and declare model unspecific wrapper functions around model specific functions. This construction allows us to use to build multiple different models against the same simulation routines by linking different realisations of these wrapper functions.

All the generated C functions are subsequently compiled by [amimodel::compileC\(\)](#). For all functions individual object files are created to reduce the computation cost of code optimization. Moreover necessary code from sundials and SuiteSparse is compiled as object files and placed in `/models/mexext`, where `mexext` stands for the string returned by matlab to the command `mexext`. The mex simulation file is compiled from [amiwrap.c](#), linked against all object necessary of sundials, SuiteSparse and model specific functions. Depending on the required solver, the compilation will either include [cvodewrap.h](#) or [idawrap.h](#). These files implement solver specific realisations of the AMI... functions used in [amiwrap.c](#) and [amici.c](#). This allows the use of the same simulation routines for both CVODES and IDAS.

## 5 Hierarchical Index

### 5.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

<b>amievent</b>	<b>37</b>
<b>amifun</b>	<b>39</b>
<b>ExpData</b>	<b>64</b>
<b>funTest</b>	<b>65</b>
handle	
<b>amidata</b>	<b>34</b>
<b>amimodel</b>	<b>44</b>
<b>SBMLode</b>	<b>69</b>
SetGet	
<b>amioption</b>	<b>60</b>
<b>modelTest</b>	<b>65</b>

<b>ReturnData</b>	<b>67</b>
sym	
optsym	<b>66</b>
<b>TempData</b>	<b>74</b>
<b>UserData</b>	<b>81</b>

## 6 Class Index

### 6.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<b>amidata</b>	
AMIDATA provides a data container to pass experimental data to the simulation routine for likelihood computation	<b>34</b>
<b>amievent</b>	
Amievent class defines the prototype for all events which later on will be transformed into C code	<b>37</b>
<b>amifun</b>	
Amifun class defines the prototype for all functions which later on will be transformed into C code	<b>39</b>
<b>amimodel</b>	
Amimodel is the object in which all model definitions are stored	<b>44</b>
<b>amioption</b>	
AMIOPTION provides an option container to pass simulation parameters to the simulation routine	<b>60</b>
<b>ExpData</b>	
Struct that carries all information about experimental data	<b>64</b>
<b>funTest</b>	
FUNTEST Summary of this class goes here Detailed explanation goes here	<b>65</b>
<b>modelTest</b>	
MODELTEST Summary of this class goes here Detailed explanation goes here	<b>65</b>
<b>optsym</b>	
OPTSYM is a placeholder class to get access to the protected sym.s	<b>66</b>
<b>ReturnData</b>	
Struct that stores all data which is later returned by the mex function	<b>67</b>
<b>SBMLode</b>	
SBMLODE carries all information about the differential equation defined by a SBML model definition file. This class acts as an interface between SBML files and <b>amimodel</b>	<b>69</b>
<b>TempData</b>	
Struct that provides temporary storage for different variables	<b>74</b>
<b>UserData</b>	
Struct that stores all user provided data	<b>81</b>

## 7 Class Documentation

### 7.1 amidata Class Reference

AMIDATA provides a data container to pass experimental data to the simulation routine for likelihood computation.

## 7.2 amievent Class Reference

the amievent class defines the prototype for all events which later on will be transformed into C code

**Public Member Functions**

- **amievent** (::symbolic **trigger**, ::symbolic **bolus**, ::symbolic **z**)  
*constructor of the amievent class. this function constructs an event object based on the provided trigger function, bolus function and output function*
- **mlhsInnerSubst** < matlabtypesubstitute > **setHflag** (::double **hflag**)  
*gethflag sets the hflag property.*

**Public Attributes**

- ::symbolic **trigger** = sym("")  
*the trigger function activates the event on every zero crossing*
- ::symbolic **bolus** = sym("")  
*the bolus function defines the change in states that is applied on every event occurrence*
- ::symbolic **z** = sym("")  
*output function for the event*
- ::logical **hflag** = logical("")  
*flag indicating that a heaviside function is present, this helps to speed up symbolic computations*

## 7.2.1 Detailed Description

Definition at line 17 of file amievent.m.

## 7.2.2 Constructor &amp; Destructor Documentation

7.2.2.1 amievent ( ::symbolic **trigger**, ::symbolic **bolus**, ::symbolic **z** )

## Parameters

<i>trigger</i>	trigger fuction, the roots of this function define the occurence of the event
<i>bolus</i>	bolus fuction, this function defines the change in the states on event occurrences
<i>z</i>	output function, this expression is evaluated on event occurrences and returned by the simulation function

Definition at line 75 of file amievent.m.

## 7.2.3 Member Function Documentation

## 7.2.3.1 mlhsInnerSubst&lt;::amievent&gt; setHflag ( ::double hflag )

## Parameters

<i>hflag</i>	value for the hflag property
--------------	------------------------------

## Return values

<i>this</i>	updated event definition object
-------------	---------------------------------

Definition at line 18 of file setHflag.m.

Here is the caller graph for this function:

## 7.2.4 Member Data Documentation

## 7.2.4.1 trigger = sym("")

## Note

This property has non-standard access specifiers: SetAccess = Private, GetAccess = Public

Matlab documentation of property attributes.

**Default:** sym("")

Definition at line 27 of file amievent.m.

## 7.2.4.2 bolus = sym("")

## Note

This property has non-standard access specifiers: SetAccess = Private, GetAccess = Public

Matlab documentation of property attributes.

**Default:** sym("")

Definition at line 38 of file amievent.m.

## 7.2.4.3 z = sym("")

**Note**

This property has non-standard access specifiers: `SetAccess = Private, GetAccess = Public`

[Matlab documentation of property attributes.](#)

**Default:** `sym("[]")`

Definition at line 49 of file amievent.m.

**7.2.4.4 hflag = logical("[]")****Note**

This property has non-standard access specifiers: `SetAccess = Private, GetAccess = Public`

[Matlab documentation of property attributes.](#)

**Default:** `logical("[]")`

Definition at line 60 of file amievent.m.

**7.3 amifun Class Reference**

the amifun class defines the prototype for all functions which later on will be transformed into C code

**Public Member Functions**

- `amifun (::string funstr,::amimodel model)`  
*constructor of the amifun class. this function initializes the function object based on the provided function name funstr and model definition object model*
- `noret::substitute printLocalVars (::amimodel model,::fileid fid)`  
*printlocalvars prints the C code for the initialisation of local variables into the file specified by fid.*
- `noret::substitute writeCcode_sensi (::amimodel model,::fileid fid)`  
*writeCcode\_sensi is a wrapper for writeCcode which loops over parameters and reduces overhead by check nonzero values*
- `noret::substitute writeCcode (::amimodel model,::fileid fid)`  
*writeCcode is a wrapper for gccode which initialises data and reduces overhead by check nonzero values*
- `noret::substitute gccode (::amimodel model,::fileid fid)`  
*gccode transforms symbolic expressions into c code and writes the respective expression into a specified file*
- `mlhsInnerSubst< matlabtypesubstitute > getDeps (::amimodel model)`  
*getDeps populates the sensiflag for the requested function*
- `mlhsInnerSubst< matlabtypesubstitute > getArgs (::amimodel model)`  
*getFArgs populates the fargstr property with the argument string of the respective model function (if applicable). model functions are not wrapped versions of functions which have a model specific name and for which the call is solver specific.*
- `mlhsInnerSubst< matlabtypesubstitute > getFArgs (::amimodel model)`  
*getFArgs populates the fargstr property with the argument string of the respective f-function (if applicable). f-function are wrapped implementations of functions which no longer have a model specific name and have solver independent calls.*
- `mlhsInnerSubst< matlabtypesubstitute > getNVecs ()`  
*getfunargs populates the nvecs property with the names of the N\_ Vector elements which are required in the execution of the function (if applicable). the information is directly extracted from the argument string*
- `mlhsInnerSubst< matlabtypesubstitute > getCVar ()`  
*getCVar populates the cvar property*
- `mlhsInnerSubst< matlabtypesubstitute > getSyms (::amimodel model)`  
*getSyms computes the symbolic expression for the requested function*
- `mlhsInnerSubst< matlabtypesubstitute > getSensiFlag ()`  
*getSensiFlag populates the sensiflag property*

## Public Attributes

- `::symbolic sym`  
*symbolic definition struct*
- `::symbolic strsym`  
*short symbolic string which can be used for the reuse of precomputed values*
- `::symbolic strsym_old`  
*short symbolic string which can be used for the reuse of old values*
- `::char funstr`  
*name of the model*
- `::char cvar`  
*name of the c variable*
- `::char argstr`  
*argument string (solver specific)*
- `::char fargstr`  
*argument string (solver unspecific)*
- `::cell deps`  
*dependencies on other functions*
- `::cell nvecs`  
*nvec dependencies*
- `::logical sensiflag`  
*indicates whether the function is a sensitivity or derivative with respect to parameters*

### 7.3.1 Detailed Description

Definition at line 17 of file amifun.m.

### 7.3.2 Constructor & Destructor Documentation

#### 7.3.2.1 `amifun ( ::string funstr, ::amimodel model )`

##### Parameters

<i>funstr</i>	name of the function
<i>model</i>	model definition object

Definition at line 101 of file amifun.m.

### 7.3.3 Member Function Documentation

#### 7.3.3.1 `noret::substitute printLocalVars ( ::amimodel model, ::fileid fid )`

##### Parameters

<i>model</i>	this struct must contain all necessary symbolic definitions
<i>fid</i>	file id in which the final expression is written

##### Return values

<i>fid</i>	Nothing
------------	---------

Definition at line 18 of file printLocalVars.m.

#### 7.3.3.2 `noret::substitute writeCcode_sensi ( ::amimodel model, ::fileid fid )`

## Parameters

<i>model</i>	model definition object
<i>fid</i>	file id in which the final expression is written

## Return values

<i>fid</i>	void
------------	------

Definition at line 18 of file writeCcode\_sensi.m.

7.3.3.3 noret::substitute writeCcode ( ::amimodel *model*, ::fileid *fid* )

## Parameters

<i>model</i>	model definition object
<i>fid</i>	file id in which the final expression is written

## Return values

<i>fid</i>	void
------------	------

Definition at line 18 of file writeCcode.m.

Here is the call graph for this function:

7.3.3.4 mlhsInnerSubst<::amifun > gccode ( ::amimodel *model*, ::fileid *fid* )

## Parameters

<i>model</i>	model definition object
<i>fid</i>	file id in which the expression should be written

## Return values

<i>this</i>	function definition object
-------------	----------------------------

Definition at line 18 of file gccode.m.

Here is the caller graph for this function:

7.3.3.5 mlhsInnerSubst<::amifun > getDeps ( ::amimodel *model* )

## Parameters

<i>model</i>	model definition object
--------------	-------------------------

## Return values

<i>this</i>	updated function definition object
-------------	------------------------------------

Definition at line 18 of file getDeps.m.

7.3.3.6 mlhsInnerSubst<::amifun > getArgs ( ::amimodel *model* )

## Parameters

<i>model</i>	model definition object
--------------	-------------------------

## Return values

<i>this</i>	updated function definition object
-------------	------------------------------------

Definition at line 18 of file getArgs.m.

7.3.3.7 mlhsInnerSubst<::amifun > getFArgs ( ::amimodel *model* )

## Parameters

<i>model</i>	model definition object
--------------	-------------------------

## Return values

<i>this</i>	updated function definition object
-------------	------------------------------------

Definition at line 18 of file getFArgs.m.

## 7.3.3.8 mlhsInnerSubst&lt;::amifun &gt; getNVecs ( )

## Return values

<i>this</i>	updated function definition object
-------------	------------------------------------

Definition at line 18 of file getNVecs.m.

## 7.3.3.9 mlhsInnerSubst&lt;::amifun &gt; getCVar ( )

## Return values

<i>this</i>	updated function definition object
-------------	------------------------------------

Definition at line 18 of file getCVar.m.

7.3.3.10 mlhsSubst< mlhsInnerSubst<::amifun >,mlhsInnerSubst<::amimodel > > getSyms ( ::amimodel *model* )

## Parameters

<i>model</i>	model definition object
--------------	-------------------------

## Return values

<i>this</i>	updated function definition object
<i>model</i>	updated model definition object

Definition at line 18 of file getSyms.m.

Here is the call graph for this function:

#### 7.3.3.11 mlhsInnerSubst<::amifun > getSensiFlag ( )

Return values

<i>this</i>	updated function definition object
-------------	------------------------------------

Definition at line 18 of file getSensiFlag.m.

## 7.4 amimodel Class Reference

amimodel is the object in which all model definitions are stored

Inheritance diagram for amimodel:

Collaboration diagram for amimodel:

### Public Member Functions

- `amimodel (::string symfun,::string modelname)`  
*constructor of the amimodel class. this function initializes the model object based on the provided symfun and modelname*
- `noret::substitute updateRHS (::sym xdot)`  
*updateRHS updates the right hand side of the model*
- `noret::substitute parseModel ()`  
*parseModel parses the model definition and computes all necessary symbolic expressions.*
- `noret::substitute generateC ()`  
*generateC generates the c files which will be used in the compilation.*
- `noret::substitute compileC ()`  
*compileC compiles the mex simulation file*
- `noret::substitute generateM (::amimodel amimodelo2)`  
*generateM generates the matlab wrapper for the compiled C files.*
- `noret::substitute getFun (::struct HTable,::string funstr)`  
*getFun generates symbolic expressions for the requested function.*
- `noret::substitute makeEvents ()`  
*makeEvents extracts discontinuities from the model right hand side and converts them into events*
- `noret::substitute makeSyms ()`  
*makeSyms extracts symbolic definition from the user provided model and checks them for consistency*
- `mlhsInnerSubst< matlabtypesubstitute > checkDeps (::struct HTable,::cell deps)`  
*checkDeps checks the dependencies of functions and populates sym fields if necessary*
- `mlhsInnerSubst< matlabtypesubstitute > loadOldHashes ()`  
*loadOldHashes loads information from a previous compilation of the model.*
- `mlhsInnerSubst< matlabtypesubstitute > augmento2 ()`  
*augmento2 augments the system equation to also include equations for sensitivity equation. This will enable us to compute second order sensitivities in a forward-adjoint or forward-forward approach later on.*
- `mlhsInnerSubst< matlabtypesubstitute > augmento2vec ()`  
*augmento2 augments the system equation to also include equations for sensitivity equation. This will enable us to compute second order sensitivities in a forward-adjoint or forward-forward approach later on.*

## Public Attributes

- `::struct sym`  
*symbolic definition struct*
- `::struct fun`  
*struct which stores information for which functions c code needs to be generated*
- `::*amievent event = amievent.empty("")`  
*struct which stores information for which functions c code needs to be generated*
- `::string modelname`  
*name of the model*
- `::struct HTable`  
*struct that contains hash values for the symbolic model definitions*
- `::double atol = 1e-8`  
*default absolute tolerance*
- `::double rtol = 1e-8`  
*default relative tolerance*
- `::int maxsteps = 1e4`  
*default maximal number of integration steps*
- `::logical debug = false`  
*flag indicating whether debugging symbols should be compiled*
- `::logical adjoint = true`  
*flag indicating whether adjoint sensitivities should be enabled*
- `::logical forward = true`  
*flag indicating whether forward sensitivities should be enabled*
- `::double t0 = 0`  
*default initial time*
- `::char wtype`  
*type of wrapper (cvodes/idas)*
- `::int nx`  
*number of states*
- `::int nxtrue = 0`  
*number of original states for second order sensitivities*
- `::int ny`  
*number of observables*
- `::int nytrue = 0`  
*number of original observables for second order sensitivities*
- `::int np`  
*number of parameters*
- `::int nk`  
*number of constants*
- `::int nevent`  
*number of events*
- `::int nz`  
*number of event outputs*
- `::int nztrue`  
*number of original event outputs for second order sensitivities*
- `::*int id`  
*flag for DAEs*
- `::int ubw`  
*upper Jacobian bandwidth*
- `::int lbw`

- *lower Jacobian bandwidth*
- `::int nnz`  
*number of nonzero entries in Jacobian*
- `::*int sparseidx`  
*dataindexes of sparse Jacobian*
- `::*int rowvals`  
*rowindexes of sparse Jacobian*
- `::*int colptrs`  
*columnindexes of sparse Jacobian*
- `::*int sparseidxB`  
*dataindexes of sparse Jacobian*
- `::*int rowvalsB`  
*rowindexes of sparse Jacobian*
- `::*int colptrsB`  
*columnindexes of sparse Jacobian*
- `::cell funs`  
*cell array of functions to be compiled*
- `::char coptim = "-O3"`  
*optimisation flag for compilation*
- `::string param = "lin"`  
*default parametrisation*
- `matlabtypesubstitute wrap_path`  
*path to wrapper*
- `matlabtypesubstitute recompile = false`  
*flag to enforce recompilation of the model*
- `matlabtypesubstitute cfun = struct("[]")`  
*storage for flags determining recompilation of individual functions*
- `matlabtypesubstitute o2flag = 0`  
*flag which identifies augmented models 0 indicates no augmentation 1 indicates augmentation by first order sensitivities (yields second order sensitivities) 2 indicates augmentation by one linear combination of first order sensitivities (yields hessian-vector product)*
- `matlabtypesubstitute compver = 6`  
*counter that allows enforcing of recompilation of models after code changes*
- `matlabtypesubstitute z2event = double("[]")`  
*vector that maps outputs to events*
- `matlabtypesubstitute splineflag = false`  
*flag indicating whether the model contains spline functions*
- `matlabtypesubstitute minflag = false`  
*flag indicating whether the model contains min functions*
- `matlabtypesubstitute maxflag = false`  
*flag indicating whether the model contains max functions*
- `::int nw = 0`  
*number of derived variables w, w is used for code optimization to reduce the number of frequently occurring expressions*
- `::int ndwdx = 0`  
*number of derivatives of derived variables w, dwdx*
- `::int ndwdp = 0`  
*number of derivatives of derived variables w, dwdp*

#### 7.4.1 Detailed Description

Definition at line 17 of file amimodel.m.

## 7.4.2 Constructor & Destructor Documentation

### 7.4.2.1 amimodel ( ::string symfun, ::string modelname )

#### Parameters

<i>symfun</i>	this is the string to the function which generates the modelstruct. You can also directly pass the struct here
<i>modelname</i>	name of the model

Definition at line 517 of file amimodel.m.

Here is the caller graph for this function:

## 7.4.3 Member Function Documentation

### 7.4.3.1 noret::substitute updateRHS ( ::sym xdot )

#### Parameters

<i>xdot</i>	new right hand side
-------------	---------------------

#### Return values

<i>this</i>	udpated model definition object
-------------	---------------------------------

Definition at line 591 of file amimodel.m.

Here is the caller graph for this function:

### 7.4.3.2 noret::substitute generateM ( ::amimodel amimodelo2 )

## Parameters

<i>amimodelo2</i>	this struct must contain all necessary symbolic definitions for second order sensitivities
-------------------	--

Definition at line 18 of file generateM.m.

7.4.3.3 noret::substitute getFun ( ::struct *HTable*, ::string *funstr* )

## Parameters

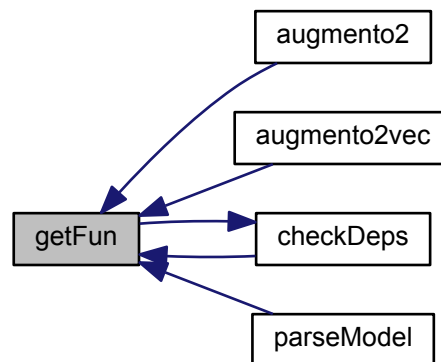

<i>HTable</i>	struct with hashes of symbolic definition from the previous compilation
<i>funstr</i>	function for which symbolic expressions should be computed

Definition at line 18 of file getFun.m.

Here is the call graph for this function:

Here is the caller graph for this function:

7.4.3.4 mlhsInnerSubst<::logical> checkDeps ( ::struct *HTable*, ::cell *deps* )

## Parameters

<i>HTable</i>	struct with reference hashes of functions in its fields
<i>deps</i>	cell array with containing a list of dependencies

## Return values

<i>cflag</i>	boolean indicating whether any of the dependencies have changed with respect to the hashes stored in HTable
--------------	---

Definition at line 18 of file checkDeps.m.

Here is the call graph for this function:

Here is the caller graph for this function:

#### 7.4.3.5 mlhsInnerSubst<::struct> loadOldHashes ( )

## Return values

<i>HTable</i>	struct with hashes of symbolic definition from the previous compilation
---------------	---

Definition at line 18 of file loadOldHashes.m.

Here is the caller graph for this function:

7.4.3.6 mlhsInnerSubst< matlabtypesubstitute > augmento2 ( )

## Return values

<i>this</i>	augmented system which contains symbolic definition of the original system and its sensitivities
-------------	--

Definition at line 18 of file augmento2.m.

Here is the call graph for this function:

#### 7.4.3.7 mlhsInnerSubst< matlabtypesubstitute > augmento2vec ( )

## Return values

<i>this</i>	augmented system which contains symbolic definition of the original system and its sensitivities
-------------	--

Definition at line 18 of file augmento2vec.m.

Here is the call graph for this function:

## 7.5 amioption Class Reference

AMIOPTION provides an option container to pass simulation parameters to the simulation routine.

Inheritance diagram for amioption:

Collaboration diagram for amioption:

### Public Member Functions

- [amioption](#) (matlabtypesubstitute varargin)  
*amioptions Construct a new amioptions object*

### Public Attributes

- `::double atol = 1e-16`  
*absolute integration tolerance*
- `::double rtol = 1e-8`  
*relative integration tolerance*

- `::double maxsteps = 1e4`  
*maximum number of steps for forward simulation*
- `::double sens_ind = double("")`  
*parameter index set for which sensitivities will be computed*
- `::double qpositivex = double("")`  
*state index set for which positivity will be enforced (EXPERIMENTAL FEATURE, USE WITH CARE)*
- `::double tstart = 0`  
*timepoint at which the optimization starts*
- `::int lmm = 2`  
*linear multistep method for forward problem*
- `::int iter = 2`  
*iteration method for linear multistep for forward problem*
- `::int linsol = 9`  
*linear solver*
- `::int stldet = true`  
*flag to activate stability limit detection*
- `::int interpType = 1`  
*type of interpolation of forward solution in adjoint problem*
- `::int lmmB = 2`  
*linear multistep method for adjoint problem*
- `::int iterB = 2`  
*iteration method for linear multistep for adjoint problem*
- `::int ism = 1`  
*method for forward sensitivity computation, this will only have an effect if forward sensitivities are requested*
- `::int sensi_meth = 1`  
*sensitivity method*
- `::int sensi = 0`  
*number of orders for which sensitivities are requested, this will only have an effect if the appropriate code was compiled*
- `::int nmaxevent = 10`  
*number of expected event occurrences per event type*
- `::int ss = 0`  
*flag indicating whether steady state sensitivities should be computed*
- `matlabtypesubstitute ordering = 1`  
*pre-ordering scheme for the LU decomposition, this only applies if the sparse direct linear solver is used*
- `::double sx0 = double("")`  
*user provided initialization of sensitivity initial conditions*
- `matlabtypesubstitute z2event = double("")`  
*mapping of event outputs to events*
- `matlabtypesubstitute id = double("")`  
*index set of states with algebraic constraints*

### 7.5.1 Detailed Description

Definition at line 17 of file amioption.m.

## 7.5.2 Constructor & Destructor Documentation

### 7.5.2.1 `amioption` ( *matlabtypesubstitute varargin* )

`OPTS = amioption()` creates a set of options with each option set to its default value.

`OPTS = amioption(PARAM, VAL, ...)` creates a set of options with the named parameters altered with the specified values.

`OPTS = amioption(OLDOPTS, PARAM, VAL, ...)` creates a copy of OLDOPTS with the named parameters altered with the specified value. OLDOPTS must not be of type `amioption` but can be a struct with the same fields

Note to see the parameters, check the documentation page for [amioption](#)

#### Parameters

<i>varargin</i>	specification of non-default fields
-----------------	-------------------------------------

Definition at line 222 of file `amioption.m`.

## 7.5.3 Member Data Documentation

### 7.5.3.1 `atol = 1e-16`

**Default:** 1e-16

Definition at line 28 of file `amioption.m`.

### 7.5.3.2 `rtol = 1e-8`

**Default:** 1e-8

Definition at line 36 of file `amioption.m`.

### 7.5.3.3 `maxsteps = 1e4`

**Default:** 1e4

Definition at line 44 of file `amioption.m`.

### 7.5.3.4 `sens_ind = double("")`

**Default:** `double("")`

Definition at line 52 of file `amioption.m`.

### 7.5.3.5 `qpositivex = double("")`

**Default:** `double("")`

Definition at line 60 of file `amioption.m`.

### 7.5.3.6 `tstart = 0`

**Default:** 0

Definition at line 68 of file `amioption.m`.

#### 7.5.3.7 Imm = 2

**Default:** 2

Definition at line 76 of file amioption.m.

#### 7.5.3.8 iter = 2

**Default:** 2

Definition at line 83 of file rdata.h.

## 7.11 SBMLode Class Reference

SBMLode carries all information about the differential equation defined by a SBML model definition file. This class acts as an interface between SBML files and [amimodel](#).

Inheritance diagram for SBMLode:

Collaboration diagram for SBMLode:

### Public Member Functions

- `SBMLode (::char filename)`  
*constructor of the `SBMLode` class. This takes the name of an SBML definition file and constructs an `SBMLode` object based on the parsed model*
- `noret::substitute importSBML (matlabtypesubstitute filename)`  
*importSBML parses the SBML document and initialises the respective `SBMLode` object accordingly*
- `noret::substitute writeAMICI (matlabtypesubstitute modelname)`  
*importSBML writes the information stored in the `SBMLode` object into an AMICI model definition file*

### Public Attributes

- `::symbolic state = sym("[]")`  
*vector of non-constant and non-boundary states*
- `::symbolic observable = sym("[]")`  
*vector of guessed observables*
- `::symbolic observable_name = sym("[]")`  
*vector of guessed observable names*
- `::symbolic param = sym("[]")`  
*vector of SBML parameters*

- `::symbolic parameter = sym([])`  
*vector of amimodel parameters*
- `::symbolic constant = sym([])`  
*vector of constant states*
- `::symbolic compartment = sym([])`  
*vector of compartments*
- `::symbolic volume = sym([])`  
*vector of compartment volumes*
- `::symbolic initState = sym([])`  
*vector of initial values for non-constant and non-boundary states*
- `::symbolic condition = sym([])`  
*vector of boundary condition states which are not constant*
- `::symbolic flux = sym([])`  
*vector of reaction fluxes*
- `::symbolic stoichiometry = sym([])`  
*matrix of reaction stoichiometries*
- `::symbolic xdot = sym([])`  
*right hand side of differential equation for states*
- `::symbolic trigger = sym([])`  
*vector of trigger functions for events*
- `::symbolic bolus = sym([])`  
*matrix of event bolus*
- `::cell funmath = {""}`  
*cell array containing the function definition*
- `::cell funarg = {""}`  
*cell array containing the function arguments*
- `::char time_symbol = char([])`  
*expression for time in the model*
- `::sym pnom = double([])`  
*nominal parameter value*
- `::sym knom = double([])`  
*nominal condition value*

### 7.11.1 Detailed Description

Definition at line 17 of file SBMLode.m.

### 7.11.2 Constructor & Destructor Documentation

#### 7.11.2.1 SBMLode ( ::char filename )

Parameters

<i>filename</i>	SBML definition file
-----------------	----------------------

Definition at line 192 of file SBMLode.m.

### 7.11.3 Member Function Documentation

#### 7.11.3.1 noret::substitute importSBML ( matlabtypesubstitute modelName )

**Parameters**

<i>modelName</i>	name of the sbml model file, without extension
------------------	--

**Return values**

<i>this</i>	initialised <a href="#">SBMLode</a> object object
-------------	---

Definition at line 18 of file importSBML.m.

Here is the call graph for this function:

### 7.11.3.2 noret::substitute writeAMICI ( matlabtypesubstitute *modelName* )

**Parameters**

<i>modelName</i>	target name of the AMICI model definition file, _syms will be appended
------------------	--

**Return values**

<i>this</i>	initialised <a href="#">SBMLode</a> object object
-------------	---

Definition at line 18 of file writeAMICI.m.

### 7.11.4 Member Data Documentation

#### 7.11.4.1 `state = sym("[]")`

**Default:** `sym("[]")`

Definition at line 29 of file SBMLode.m.

#### 7.11.4.2 `observable = sym("[]")`

**Default:** `sym("[]")`

Definition at line 37 of file SBMLode.m.

#### 7.11.4.3 `observable_name = sym("[]")`

**Default:** `sym("[]")`

Definition at line 45 of file SBMLode.m.

#### 7.11.4.4 `param = sym("[]")`

**Default:** `sym("[]")`

Definition at line 53 of file SBMLode.m.

7.11.4.5 `parameter = sym("[]")`

**Default:** `sym("[]")`

Definition at line 61 of file SBMLode.m.

7.11.4.6 `constant = sym("[]")`

**Default:** `sym("[]")`

Definition at line 69 of file SBMLode.m.

7.11.4.7 `compartment = sym("[]")`

**Default:** `sym("[]")`

Definition at line 77 of file SBMLode.m.

7.11.4.8 `volume = sym("[]")`

**Default:** `sym("[]")`

Definition at line 85 of file SBMLode.m.

7.11.4.9 `initState = sym("[]")`

**Default:** `sym("[]")`

Definition at line 93 of file SBMLode.m.

7.11.4.10 `condition = sym("[]")`

**Default:** `sym("[]")`

Definition at line 101 of file SBMLode.m.

7.11.4.11 `flux = sym("[]")`

**Default:** `sym("[]")`

Definition at line 109 of file SBMLode.m.

7.11.4.12 `stoichiometry = sym("[]")`

**Default:** `sym("[]")`

Definition at line 117 of file SBMLode.m.

7.11.4.13 `xdot = sym("[]")`

**Default:** `sym("[]")`

Definition at line 125 of file SBMLode.m.

7.11.4.14 `trigger = sym("[ ]")`

**Default:** `sym("[ ]")`

Definition at line 133 of file SBMLode.m.

7.11.4.15 `bolus = sym("[ ]")`

**Default:** `sym("[ ]")`

Definition at line 141 of file SBMLode.m.

7.11.4.16 `funmath = {""}`

**Default:** `{""}`

Definition at line 149 of file SBMLode.m.

7.11.4.17 `funarg = {""}`

**Default:** `{""}`

Definition at line 157 of file SBMLode.m.

7.11.4.18 `time_symbol = char("[ ]")`

**Default:** `char("[ ]")`

Definition at line 165 of file SBMLode.m.

7.11.4.19 `pnom = double("[ ]")`

**Default:** `double("[ ]")`

Definition at line 173 of file SBMLode.m.

7.11.4.20 `knom = double("[ ]")`

**Default:** `double("[ ]")`

Definition at line 181 of file SBMLode.m.

parameter derivative of data likelihood

Definition at line 125 of file tdata.h.

**7.12.2.23 realtype\* am\_dgdx**

state derivative of data likelihood

Definition at line 127 of file tdata.h.

**7.12.2.24 realtype am\_r**

event likelihood

Definition at line 129 of file tdata.h.

**7.12.2.25 realtype\* am\_drdp**

parameter derivative of event likelihood

Definition at line 131 of file tdata.h.

**7.12.2.26 realtype\* am\_drdx**

state derivative of event likelihood

Definition at line 133 of file tdata.h.

**7.12.2.27 realtype am\_rval**

root function likelihood

Definition at line 135 of file tdata.h.

**7.12.2.28 realtype\* am\_drvaldp**

parameter derivative of root function likelihood

Definition at line 137 of file tdata.h.

**7.12.2.29 realtype\* am\_drvaldx**

state derivative of root function likelihood

Definition at line 139 of file tdata.h.

**7.12.2.30 realtype\* am\_dzdx**

state derivative of event

Definition at line 141 of file tdata.h.

**7.12.2.31 realtype\* am\_dzdp**

parameter derivative of event

Definition at line 143 of file tdata.h.

**7.12.2.32 realtype\* am\_dydp**

parameter derivative of observable

Definition at line 145 of file tdata.h.

**7.12.2.33 realtype\* am\_dydx**

state derivative of observable

Definition at line 147 of file tdata.h.

**7.12.2.34 realtype\* am\_yS0**

initial sensitivity of observable

Definition at line 149 of file tdata.h.

**7.12.2.35 realtype\* am\_sigma\_y**

data standard deviation

Definition at line 151 of file tdata.h.

**7.12.2.36 realtype\* am\_dsigma\_ydp**

parameter derivative of data standard deviation

Definition at line 153 of file tdata.h.

**7.12.2.37 realtype\* am\_sigma\_z**

event standard deviation

Definition at line 155 of file tdata.h.

**7.12.2.38 realtype\* am\_dsigma\_zdp**

parameter derivative of event standard deviation

Definition at line 157 of file tdata.h.

**7.12.2.39 realtype\* am\_x\_tmp**

state array

Definition at line 160 of file tdata.h.

**7.12.2.40 realtype\* am\_sx\_tmp**

sensitivity state array

Definition at line 162 of file tdata.h.

**7.12.2.41 realtype\* am\_dx\_tmp**

differential state array

Definition at line 164 of file tdata.h.

**7.12.2.42 realtype\* am\_sdx\_tmp**

differential sensitivity state array

Definition at line 166 of file tdata.h.

**7.12.2.43 realtype\* am\_xdot\_tmp**

time derivative state array

Definition at line 168 of file tdata.h.

**7.12.2.44 realtype\* am\_xB\_tmp**

differential adjoint state array

Definition at line 170 of file tdata.h.

**7.12.2.45 realtype\* am\_xQB\_tmp**

quadrature state array

Definition at line 172 of file tdata.h.

**7.12.2.46 realtype\* am\_dxB\_tmp**

differential adjoint state array

Definition at line 174 of file tdata.h.

**7.12.2.47 realtype\* am\_id\_tmp**

index indicating DAE equations array

Definition at line 176 of file tdata.h.

**7.12.2.48 int\* am\_rootsfound**

array of flags indicating which root has been found

array of length nr with the indices of the user functions gi found to have a root. For  $i = 0, \dots, nr-1$ , rootsfound[i] = 0 if gi has a root, and = 0 if not.

Definition at line 183 of file tdata.h.

**7.12.2.49 int\* am\_rootidx**

array of index which root has been found

Definition at line 185 of file tdata.h.

**7.12.2.50 int\* am\_nroots**

array of number of found roots for a certain event type

Definition at line 187 of file tdata.h.

**7.12.2.51 double\* am\_rootvals**

array of values of the root function

Definition at line 189 of file tdata.h.

**7.12.2.52 realtype\* am\_deltax**

change in x

Definition at line 193 of file tdata.h.

**7.12.2.53 realtype\* am\_deltasx**

change in sx

Definition at line 195 of file tdata.h.

**7.12.2.54 realtype\* am\_deltaxB**

change in xB

Definition at line 197 of file tdata.h.

#### 7.12.2.55 realtype\* am\_deltaqB

change in qB

Definition at line 199 of file tdata.h.

#### 7.12.2.56 int am\_which

integer for indexing of backwards problems

Definition at line 203 of file tdata.h.

#### 7.12.2.57 realtype\* am\_discs

array containing the time-points of discontinuities

Definition at line 206 of file tdata.h.

#### 7.12.2.58 realtype\* am\_irdiscs

array containing the index of discontinuities

Definition at line 208 of file tdata.h.

## 7.13 UserData Struct Reference

struct that stores all user provided data

```
#include <udata.h>
```

### 7.13.1 Detailed Description

Definition at line 78 of file `udata.h`.

### 7.13.2 Member Data Documentation

#### 7.13.2.1 double\* [am\\_qpositivex](#)

positivity flag

Definition at line 80 of file `udata.h`.

#### 7.13.2.2 int\* [am\\_plist](#)

parameter reordering

Definition at line 83 of file `udata.h`.

#### 7.13.2.3 int [am\\_np](#)

number of parameters

Definition at line 85 of file `udata.h`.

#### 7.13.2.4 int am\_ny

number of observables

Definition at line 87 of file udata.h.

#### 7.13.2.5 int am\_nytrue

number of observables in the unaugmented system

Definition at line 89 of file udata.h.

#### 7.13.2.6 int am\_nx

number of states

Definition at line 91 of file udata.h.

#### 7.13.2.7 int am\_nz

number of event outputs

Definition at line 93 of file udata.h.

#### 7.13.2.8 int am\_nztrue

number of event outputs in the unaugmented system

Definition at line 95 of file udata.h.

#### 7.13.2.9 int am\_ne

number of events

Definition at line 97 of file udata.h.

#### 7.13.2.10 int am\_nt

number of timepoints

Definition at line 99 of file udata.h.

#### 7.13.2.11 int am\_nw

number of common expressions

Definition at line 101 of file udata.h.

#### 7.13.2.12 int am\_ndwdx

number of derivatives of common expressions wrt x

Definition at line 103 of file udata.h.

#### 7.13.2.13 int am\_ndwdp

number of derivatives of common expressions wrt p

Definition at line 105 of file udata.h.

#### 7.13.2.14 int am\_nnz

number of nonzero entries in jacobian

Definition at line 107 of file udata.h.

**7.13.2.15 int am\_nmaxevent**

maximal number of events to track

Definition at line 109 of file udata.h.

**7.13.2.16 double\* am\_p**

parameter array

Definition at line 112 of file udata.h.

**7.13.2.17 double\* am\_k**

constants array

Definition at line 114 of file udata.h.

**7.13.2.18 double am\_tstart**

starting time

Definition at line 117 of file udata.h.

**7.13.2.19 double\* am\_ts**

timepoints

Definition at line 119 of file udata.h.

**7.13.2.20 double\* am\_pbar**

scaling of parameters

Definition at line 122 of file udata.h.

**7.13.2.21 double\* am\_xbar**

scaling of states

Definition at line 124 of file udata.h.

**7.13.2.22 double\* am\_idlist**

flag array for DAE equations

Definition at line 127 of file udata.h.

**7.13.2.23 int am\_sensi**

flag indicating whether sensitivities are supposed to be computed

Definition at line 130 of file udata.h.

**7.13.2.24 double am\_atol**

absolute tolerances for integration

Definition at line 132 of file udata.h.

**7.13.2.25 double am\_rtol**

relative tolerances for integration

Definition at line 134 of file udata.h.

**7.13.2.26 int am\_maxsteps**

maximum number of allowed integration steps

Definition at line 136 of file udata.h.

**7.13.2.27 int am\_ism**

internal sensitivity method

a flag used to select the sensitivity solution method. Its value can be CV\_SIMULTANEOUS or CV\_STAGGERED. Only applies for Forward Sensitivities.

Definition at line 142 of file udata.h.

**7.13.2.28 int am\_sensi\_meth**

method for sensitivity computation

CW\_FSA for forward sensitivity analysis, CW\_ASA for adjoint sensitivity analysis

Definition at line 148 of file udata.h.

**7.13.2.29 int am\_linsol**

linear solver specification

Definition at line 150 of file udata.h.

**7.13.2.30 int am\_interpType**

interpolation type

specifies the interpolation type for the forward problem solution which is then used for the backwards problem. can be either CV\_POLYNOMIAL or CV\_HERMITE

Definition at line 155 of file udata.h.

**7.13.2.31 int am\_lmm**

linear multistep method

specifies the linear multistep method and may be one of two possible values: CV\_ADAMS or CV\_BDF.

Definition at line 161 of file udata.h.

**7.13.2.32 int am\_iter**

nonlinear solver

specifies the type of nonlinear solver iteration and may be either CV\_NEWTON or CV\_FUNCTIONAL.

Definition at line 167 of file udata.h.

**7.13.2.33 boolean\_t am\_stldet**

flag controlling stability limit detection

Definition at line 170 of file udata.h.

**7.13.2.34 int am\_ubw**

upper bandwidth of the jacobian

Definition at line 173 of file udata.h.

**7.13.2.35 int am\_lbw**

lower bandwidth of the jacobian

Definition at line 175 of file udata.h.

**7.13.2.36 boolean\* am\_bsx0**

flag for sensitivity initialisation

flag which determines whether analytic sensitivities initialisation or provided initialisation should be used

Definition at line 181 of file udata.h.

**7.13.2.37 double\* am\_sx0data**

sensitivity initialisation

Definition at line 184 of file udata.h.

**7.13.2.38 int am\_event\_model**

error model for events

Definition at line 187 of file udata.h.

**7.13.2.39 int am\_data\_model**

error model for udata

Definition at line 189 of file udata.h.

**7.13.2.40 int am\_ordering**

state ordering

Definition at line 192 of file udata.h.

**7.13.2.41 double\* am\_z2event**

index indicating to which event an event output belongs

Definition at line 195 of file udata.h.

**7.13.2.42 double\* am\_h**

flag indicating whether a certain heaviside function should be active or not

Definition at line 198 of file udata.h.

**7.13.2.43 SlsMat am\_J**

temporary storage of Jacobian data across functions

Definition at line 201 of file udata.h.

**7.13.2.44 realtype\* am\_dxdotdp**

temporary storage of dxdotdp data across functions

Definition at line 203 of file udata.h.

**7.13.2.45 realtype\* am\_w**

temporary storage of w data across functions

Definition at line 205 of file udata.h.

**7.13.2.46 realtype\* am\_dwdx**

tempory storage of dwdx data across functions

Definition at line 207 of file udata.h.

**7.13.2.47 realtype\* am\_dwdp**

tempory storage of dwdp data across functions

Definition at line 209 of file udata.h.

**7.13.2.48 realtype\* am\_M**

tempory storage of M data across functions

Definition at line 211 of file udata.h.

**7.13.2.49 realtype\* am\_dfdx**

tempory storage of dfdx data across functions

Definition at line 213 of file udata.h.

**7.13.2.50 boolean type am\_nan\_dxdotdp**

flag indicating whether a NaN in dxdotdp has been reported

Definition at line 216 of file udata.h.

**7.13.2.51 boolean type am\_nan\_J**

flag indicating whether a NaN in J has been reported

Definition at line 218 of file udata.h.

**7.13.2.52 boolean type am\_nan\_JSparse**

flag indicating whether a NaN in JSparse has been reported

Definition at line 220 of file udata.h.

**7.13.2.53 boolean type am\_nan\_xdot**

flag indicating whether a NaN in xdot has been reported

Definition at line 222 of file udata.h.

**7.13.2.54 boolean type am\_nan\_xBdot**

flag indicating whether a NaN in xBdot has been reported

Definition at line 224 of file udata.h.

**7.13.2.55 boolean type am\_nan\_qBdot**

flag indicating whether a NaN in qBdot has been reported

Definition at line 226 of file udata.h.

## 8 File Documentation

## 8.1 amiwrap.c File Reference

core routines for mex interface

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <math.h>
#include <mex.h>
#include "wrapfunctions.h"
#include <include/amici.h>
Include dependency graph for amiwrap.c:
```

This graph shows which files directly or indirectly include this file:

### Macros

- `#define` [\\_USE\\_MATH\\_DEFINES](#)
- `#define` [M\\_PI](#) 3.14159265358979323846

### Functions

- void [mexFunction](#) (int nlhs, mxArray \*plhs[], int nrhs, const mxArray \*prhs[])

#### 8.1.1 Detailed Description

This file defines the fuction `mexFunction` which is executed upon calling the mex file from matlab

#### 8.1.2 Macro Definition Documentation

### 8.1.2.1 #define \_USE\_MATH\_DEFINES

MS definition of PI and other constants

Definition at line 12 of file amiwrap.c.

### 8.1.2.2 #define M\_PI 3.14159265358979323846

numeric definition of PI for settings where the system does not provide one

Definition at line 16 of file amiwrap.c.

## 8.1.3 Function Documentation

### 8.1.3.1 void mexFunction ( int *nlhs*, mxArray \* *plhs*[], int *nrhs*, const mxArray \* *prhs*[] )

mexFunction is the main function of the mex simulation file this function carries out all numerical integration and writes results into the sol struct.

#### Parameters

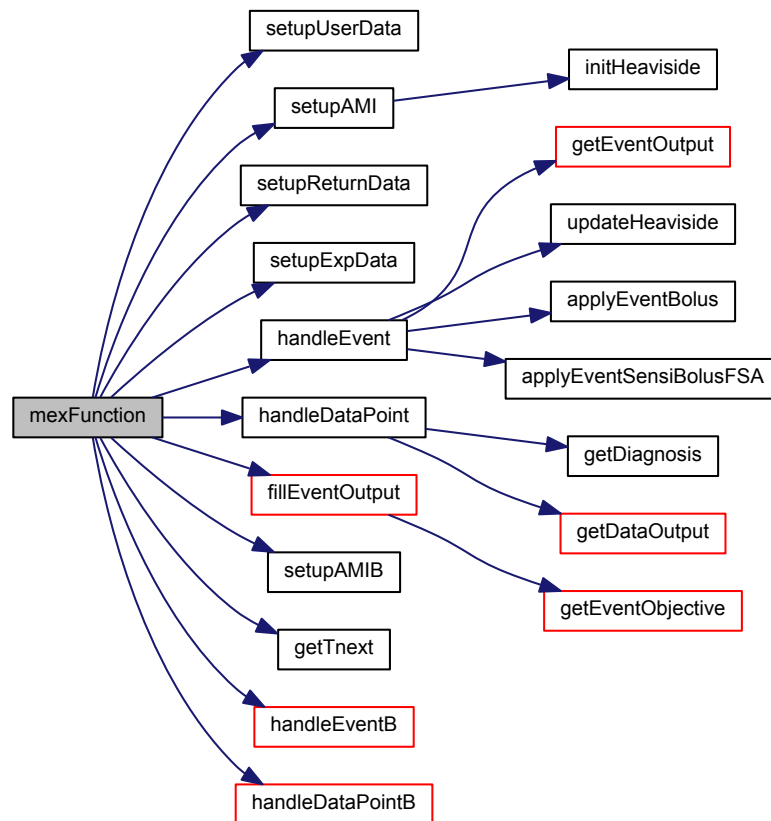

in	<i>nlhs</i>	number of output arguments of the matlab call <b>Type:</b> int
out	<i>plhs</i>	pointer to the array of output arguments <b>Type:</b> mxArray
in	<i>nrhs</i>	number of input arguments of the matlab call <b>Type:</b> int
in	<i>prhs</i>	pointer to the array of input arguments <b>Type:</b> mxArray

#### Returns

void

Definition at line 31 of file amiwrap.c.

Here is the call graph for this function:

## 8.2 amiwrap.m File Reference

AMIWRAP generates c mex files for the simulation of systems of differential equations via CVODES and IDAS.

### Functions

- `noret::substitute` [amiwrap](#) (`matlabtypesubstitute varargin`)

*AMIWRAP generates c mex files for the simulation of systems of differential equations via CVODES and IDAS.*

### 8.2.1 Function Documentation

8.2.1.1 noret::substitute amiwrap ( matlabtypesubstitute *varargin* )

## Parameters

<i>varargin</i>	<pre>1 amiwrap ( modelname, symfun, tdir, o2flag )</pre> <p><i>Required Parameters for varargin:</i></p> <ul style="list-style-type: none"> <li>• modelname specifies the name of the model which will be later used for the naming of the simulation file</li> <li>• symfun specifies a function which executes model definition see <a href="#">Model Definition</a> for details</li> <li>• tdir target directory where the simulation file should be placed <b>Default:</b> \$AMI-CIDIR/models/modelname</li> <li>• o2flag boolean whether second order sensitivities should be enabled <b>Default:</b> false</li> </ul>
-----------------	---

## Return values

<i>o2flag</i>	void
---------------	------

Definition at line 17 of file amiwrap.m.

## 8.3 SBML2AMICI.m File Reference

SBML2AMICI generates AMICI model definition files from SBML.

## Functions

- noret::substitute [SBML2AMICI](#) (matlabtypesubstitute filename, matlabtypesubstitute modelname)

*SBML2AMICI generates AMICI model definition files from SBML.*

## 8.3.1 Function Documentation

8.3.1.1 noret::substitute SBML2AMICI ( matlabtypesubstitute *filename*, matlabtypesubstitute *modelname* )

## Parameters

<i>filename</i>	name of the SBML file (withouth extension)
<i>modelname</i>	name of the model, this will define the name of the output file

## Return values

<i>modelname</i>	void
------------------	------

Definition at line 17 of file SBML2AMICI.m.

## 8.4 src/amici.c File Reference

core routines for integration

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <math.h>
#include <mex.h>
#include "wrapfunctions.h"
#include <include/amici.h>
```

Include dependency graph for amici.c:

## Macros

- `#define _USE_MATH_DEFINES`
- `#define M_PI 3.14159265358979323846`
- `#define initField2(FIELD, D1, D2)`  
*initField2 initialises a field of mxsol with an empty matrix and attaches FIELDdata as data pointer*
- `#define initField3(FIELD, D1, D2, D3)`  
*initField3 initialises a field of mxsol with an empty tensor and attaches FIELDdata as data pointer*
- `#define readOptionScalar(OPTION, TYPE)`  
*readOptionScalar reads the scalar property from the options struct and casts it to the specified type*
- `#define readOptionData(OPTION)`  
*readOptionData reads the matrix property from the options struct*
- `#define AMI_SUCCESS 0`

## Functions

#### 8.4.1 Macro Definition Documentation

##### 8.4.1.1 #define \_USE\_MATH\_DEFINES

return value indicating successful execution MS definition of PI and other constants

Definition at line 12 of file amici.c.

##### 8.4.1.2 #define M\_PI 3.14159265358979323846

numeric definition of PI for settings where the system does not provide one

Definition at line 16 of file amici.c.

##### 8.4.1.3 #define initField2( FIELD, D1, D2 )

**Value:**

```
mxArray *mx ## FIELD; \
mx ## FIELD = mxCreateDoubleMatrix(D1,D2,mxREAL); \
FIELD ## data = mxGetPr(mx ## FIELD); \
mxSetField(mxsol,0, #FIELD, mx ## FIELD)
```

#### Parameters

in	<i>FIELD</i>	name of the field <b>Type:</b> char
in	<i>D1</i>	number of rows <b>Type:</b> int
in	<i>D2</i>	number of columns <b>Type:</b> int

Definition at line 28 of file amici.c.

##### 8.4.1.4 #define initField3( FIELD, D1, D2, D3 )

**Value:**

```
mxArray *mx ## FIELD; \
const mwSize dims ## FIELD[]={D1,D2,D3}; \
mx ## FIELD = mxCreateNumericArray(3,dims ## FIELD,mxDOUBLE_CLASS,mxREAL); \
FIELD ## data = mxGetPr(mx ## FIELD); \
mxSetField(mxsol,0,#FIELD,mx ## FIELD)
```

#### Parameters

in	<i>FIELD</i>	name of the field <b>Type:</b> char
in	<i>D1</i>	number of rows <b>Type:</b> int
in	<i>D2</i>	number of columns <b>Type:</b> int
in	<i>D3</i>	size of third dimension <b>Type:</b> int

Definition at line 41 of file amici.c.

#### 8.4.1.5 #define readOptionScalar( *OPTION*, *TYPE* )

##### Value:

```
if(mxGetProperty(prhs[3],0,#OPTION)){ \
    OPTION = (TYPE)mxGetScalar(mxGetProperty(prhs[3],0,#OPTION)); \
} else { \
    mexWarnMsgIdAndTxt("AMICI:mex:OPTION","Provided options are not of class amioption!"); \
    return(NULL); \
}
```

#### Parameters

in	<i>OPTION</i>	name of the field <b>Type:</b> char
in	<i>TYPE</i>	number of rows <b>Type:</b> type

Definition at line 53 of file amici.c.

#### 8.4.1.6 #define readOptionData( *OPTION* )

##### Value:

```
if(mxGetProperty(prhs[3],0,#OPTION)){ \
    OPTION = mxGetData(mxGetProperty(prhs[3],0,#OPTION)); \
} else { \
    mexWarnMsgIdAndTxt("AMICI:mex:OPTION","Provided options are not of class amioption!"); \
    return(NULL); \
}
```

#### Parameters

in	<i>OPTION</i>	name of the field <b>Type:</b> char
----	---------------	--

Definition at line 65 of file amici.c.

#### 8.4.1.7 #define AMI\_SUCCESS 0

definition of the return value for successful function evaluations

Definition at line 74 of file amici.c.

#### 8.4.2 Function Documentation

#### 8.4.2.1 UserData setupUserData ( const mxArray \* prhs[ ] )

setupUserData extracts information from the matlab call and returns the corresponding [UserData](#) struct

**Parameters**

in	<i>prhs</i>	pointer to the array of input arguments <b>Type:</b> mxArray
----	-------------	---

**Returns**

udata: struct containing all provided user data

**Type:** [UserData](#)

Definition at line 76 of file amici.c.

Here is the caller graph for this function:

#### 8.4.2.2 ReturnData setupReturnData ( mxArray \* *plhs*[], void \* *user\_data*, double \* *pstatus* )

setupReturnData initialises the return data struct

**Parameters**

in	<i>plhs</i>	user input <b>Type:</b> *mxArray
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
in	<i>pstatus</i>	pointer to the current status flag <b>Type:</b> *double

**Returns**

rdata: return data struct

**Type:** [ReturnData](#)

user udata

Definition at line 220 of file amici.c.

Here is the caller graph for this function:

#### 8.4.2.3 ExpData setupExpData ( const mxArray \* *prhs*[], void \* *user\_data* )

setupExpData initialises the experimental data struct

**Parameters**

in	<i>prhs</i>	user input <b>Type:</b> *mxArray
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>

**Returns**

edata: experimental data struct

**Type:** [ExpData](#)

user udata

Definition at line 304 of file amici.c.

Here is the caller graph for this function:

#### 8.4.2.4 void\* setupAMI ( int \* *status*, void \* *user\_data*, void \* *temp\_data* )

setupAMIs initialises the ami memory object

**Parameters**

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
in	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

**Returns**

ami\_mem pointer to the ccodes/idas memory block

Definition at line 406 of file amici.c.

Here is the call graph for this function:

Here is the caller graph for this function:

#### 8.4.2.5 void setupAMIB ( int \* status, void \* ami\_mem, void \* user\_data, void \* temp\_data )

setupAMIB initialises the AMI memory object for the backwards problem

##### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>ami_mem</i>	pointer to the solver memory object of the forward problem
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
in	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

##### Returns

ami\_mem pointer to the cvodes/idas memory block for the backward problem

Definition at line 725 of file amici.c.

Here is the caller graph for this function:

#### 8.4.2.6 void getDataSensisFSA ( int \* status, int it, void \* ami\_mem, void \* user\_data, void \* return\_data, void \* exp\_data, void \* temp\_data )

getDataSensisFSA extracts data information for forward sensitivity analysis

##### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
-----	---------------	---

in	<i>it</i>	index of current timepoint <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
in	<i>exp_data</i>	pointer to the experimental data struct <b>Type:</b> <a href="#">ExpData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

### Returns

void

Definition at line 920 of file amici.c.

Here is the caller graph for this function:

**8.4.2.7** void `getDataSensisASA` ( int \* *status*, int *it*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *exp\_data*, void \* *temp\_data* )

`getDataSensisASA` extracts data information for adjoint sensitivity analysis

### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>it</i>	index of current timepoint <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
in	<i>exp_data</i>	pointer to the experimental data struct <b>Type:</b> <a href="#">ExpData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

**Returns**

void

Definition at line 968 of file amici.c.

Here is the caller graph for this function:

**8.4.2.8** void `getDataOutput` ( int \* *status*, int *it*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *exp\_data*, void \* *temp\_data* )

`getDataOutput` extracts output information for data-points

**Parameters**

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>it</i>	index of current timepoint <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
in	<i>exp_data</i>	pointer to the experimental data struct <b>Type:</b> <a href="#">ExpData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

**Returns**

void

Definition at line 1016 of file amici.c.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.4.2.9** void `getEventSensisFSA` ( int \* *status*, int *ie*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *temp\_data* )

`getEventSensisFSA` extracts event information for forward sensitivity analysis

#### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> int
in	<i>ie</i>	index of event type <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

#### Returns

void

Definition at line 1068 of file `amici.c`.

Here is the caller graph for this function:

**8.4.2.10** void `getEventSensisFSA_tf` ( int \* *status*, int *ie*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *temp\_data* )

`getEventSensisFSA_tf` extracts event information for forward sensitivity analysis for events that happen at the end of the considered interval

#### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> int
in	<i>ie</i>	index of event type <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

**Returns**

void

Definition at line 1098 of file amici.c.

Here is the caller graph for this function:

**8.4.2.11** void `getEventSensisASA` ( int \* *status*, int *ie*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *exp\_data*, void \* *temp\_data* )

`getEventSensisASA` extracts event information for adjoint sensitivity analysis

**Parameters**

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>ie</i>	index of event type <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
in	<i>exp_data</i>	pointer to the experimental data struct <b>Type:</b> <a href="#">ExpData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

**Returns**

void

Definition at line 1129 of file amici.c.

Here is the caller graph for this function:

**8.4.2.12** void `getEventSigma` ( int \* *status*, int *ie*, int *iz*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *exp\_data*, void \* *temp\_data* )

`getEventSigma` extracts fills `sigma_z` either from the user defined function or from user input

#### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>ie</i>	event type index <b>Type:</b> int
in	<i>iz</i>	event output index <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
in	<i>exp_data</i>	pointer to the experimental data struct <b>Type:</b> <a href="#">ExpData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

#### Returns

void

Definition at line 1193 of file `amici.c`.

Here is the caller graph for this function:

**8.4.2.13** void `getEventObjective` ( int \* *status*, int *ie*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *exp\_data*, void \* *temp\_data* )

`getEventObjective` updates the objective function on the occurrence of an event

## Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>ie</i>	event type index <b>Type:</b> int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>return_data</i>	pointer to the return data struct <b>Type:</b> <a href="#">ReturnData</a>
in	<i>exp_data</i>	pointer to the experimental data struct <b>Type:</b> <a href="#">ExpData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

## Returns

void

Definition at line 1230 of file amici.c.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.4.2.14** void `getEventOutput` ( int \* *status*, realtype \* *tlastroot*, void \* *ami\_mem*, void \* *user\_data*, void \* *return\_data*, void \* *exp\_data*, void \* *temp\_data* )

`getEventOutput` extracts output information for events

## Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
-----	---------------	---

in	<i>tlastroot</i>	timepoint of last occurred event <b>Type:</b> *realtype
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>

#### 8.4.2.20 realtype getTnext ( realtype \* troot, int iroot, realtype \* tdata, int it, void \* user\_data )

getTnext computes the next timepoint to integrate to. This is the maximum of tdata and troot but also takes into account if it<0 or iroot<0 where these expressions do not necessarily make sense

## Parameters

in	<i>troot</i>	timepoint of next event <b>Type:</b> realtype
----	--------------	--

in	<i>iroot</i>	index of next event <b>Type:</b> int
in	<i>tdata</i>	timepoint of next data point <b>Type:</b> realtype
in	<i>it</i>	index of next data point <b>Type:</b> int
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>

**Returns**

tnext next timepoint

**Type:** realtype

Definition at line 1648 of file amici.c.

Here is the caller graph for this function:

#### 8.4.2.21 void applyEventBolus ( int \* status, void \* ami\_mem, void \* user\_data, void \* temp\_data )

applyEventBolus applies the event bolus to the current state

**Parameters**

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

**Returns**

void

Definition at line 1693 of file amici.c.

Here is the caller graph for this function:

#### 8.4.2.22 void applyEventSensiBolusFSA ( int \* *status*, void \* *ami\_mem*, void \* *user\_data*, void \* *temp\_data* )

applyEventSensiBolusFSA applies the event bolus to the current sensitivities

##### Parameters

out	<i>status</i>	flag indicating success of execution <b>Type:</b> *int
in	<i>ami_mem</i>	pointer to the solver memory block <b>Type:</b> *void
in	<i>user_data</i>	pointer to the user data struct <b>Type:</b> <a href="#">UserData</a>
out	<i>temp_data</i>	pointer to the temporary data struct <b>Type:</b> <a href="#">TempData</a>

- static double [sinteg](#) (int n, double u, double x[], double y[], double b[], double c[], double d[])

### 8.5.1 Detailed Description

#### Author

Peter & Nigel, Design Software, 42 Gubberley St, Kenmore, 4069, Australia.

### 8.5.2 Function Documentation

8.5.2.1 static int [spline](#) ( int n, int end1, int end2, double slope1, double slope2, double x[], double y[], double b[], double c[], double d[] ) [static]

Evaluate the coefficients b[i], c[i], d[i], i = 0, 1, .. n-1 for a cubic interpolating spline

$S(xx) = Y[i] + b[i] * w + c[i] * w**2 + d[i] * w**3$  where  $w = xx - x[i]$  and  $x[i] \leq xx \leq x[i+1]$

The n supplied data points are x[i], y[i], i = 0 ... n-1.

#### Parameters

in	n	The number of data points or knots (n >= 2)
in	end1	0: default condition 1: specify the slopes at x[0]
in	end2	0: default condition 1: specify the slopes at x[n-1]
in	slope1	slope at x[0]
in	slope2	slope at x[n-1]
in	x[]	the abscissas of the knots in strictly increasing order
in	y[]	the ordinates of the knots
out	b[]	array of spline coefficients
out	c[]	array of spline coefficients
out	d[]	array of spline coefficients

#### Return values

0	normal return
1	less than two data points; cannot interpolate
2	x[] are not in ascending order

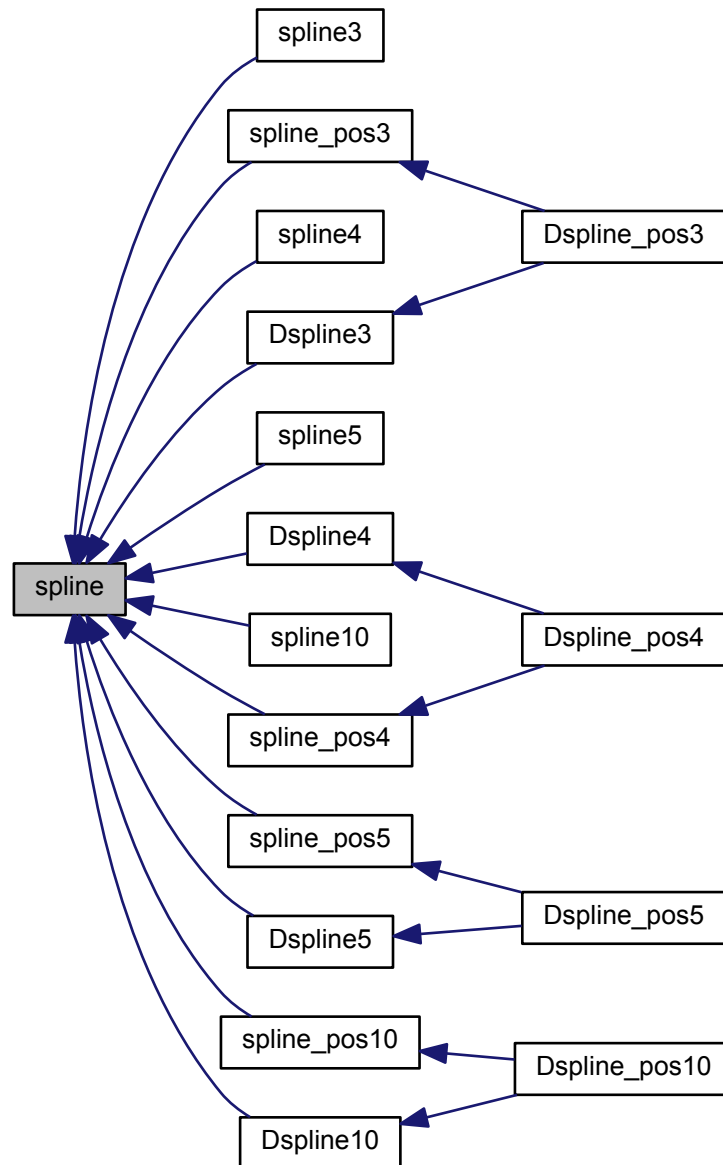

#### Notes

- The accompanying function [seval\(\)](#) may be used to evaluate the spline while [deriv](#) will provide the first derivative.
- Using p to denote differentiation  $y[i] = S(X[i])$   $b[i] = S_p(X[i])$   $c[i] = S_{pp}(X[i])/2$   $d[i] = S_{ppp}(X[i])/6$  ( Derivative from the right )
- Since the zero elements of the arrays ARE NOW used here, all arrays to be passed from the main program should be dimensioned at least [n]. These routines will use elements [0 .. n-1].
- Adapted from the text Forsythe, G.E., Malcolm, M.A. and Moler, C.B. (1977) "Computer Methods for Mathematical Computations" Prentice Hall
- Note that although there are only n-1 polynomial segments, n elements are required in b, c, d. The elements b[n-1], c[n-1] and d[n-1] are set to continue the last segment past x[n-1].

**8.5.2.2** static double seval ( int n, double u, double x[], double y[], double b[], double c[], double d[] ) [static]

Evaluate the cubic spline function

$S(x) = y[i] + b[i] * w + c[i] * w^2 + d[i] * w^3$  where  $w = u - x[i]$  and  $x[i] \leq u \leq x[i+1]$  Note that Horner's rule is used. If  $u < x[0]$  then  $i = 0$  is used. If  $u > x[n-1]$  then  $i = n-1$  is used.

**Parameters**

in	<i>n</i>	The number of data points or knots ( $n \geq 2$ )
in	<i>u</i>	the abscissa at which the spline is to be evaluated
in	<i>x[]</i>	the abscissas of the knots in strictly increasing order
in	<i>y[]</i>	the ordinates of the knots
in	<i>b</i>	array of spline coefficients computed by <a href="#">spline()</a> .
in	<i>c</i>	array of spline coefficients computed by <a href="#">spline()</a> .
in	<i>d</i>	array of spline coefficients computed by <a href="#">spline()</a> .

**Returns**

the value of the spline function at *u*

**Notes**

- If *u* is not in the same interval as the previous call then a binary search is performed to determine the proper interval.

Definition at line 208 of file `spline.c`.

Here is the caller graph for this function:

**8.5.2.3** static double deriv ( int n, double u, double x[], double b[], double c[], double d[] ) [static]

Evaluate the derivative of the cubic spline function

$S(x) = B[i] + 2.0 * C[i] * w + 3.0 * D[i] * w^2$  where  $w = u - X[i]$  and  $X[i] \leq u \leq X[i+1]$  Note that Horner's rule is used. If  $U < X[0]$  then  $i = 0$  is used. If  $U > X[n-1]$  then  $i = n-1$  is used.

**Parameters**

in	$n$	the number of data points or knots ( $n \geq 2$ )
in	$u$	the abscissa at which the derivative is to be evaluated
in	$x$	the abscissas of the knots in strictly increasing order
in	$b$	array of spline coefficients computed by <a href="#">spline()</a>
in	$c$	array of spline coefficients computed by <a href="#">spline()</a>
in	$d$	array of spline coefficients computed by <a href="#">spline()</a>

**Returns**

the value of the derivative of the spline function at  $u$

**Notes**

- If  $u$  is not in the same interval as the previous call then a binary search is performed to determine the proper interval.

Definition at line 264 of file `spline.c`.

**8.5.2.4** `static double sinteg ( int  $n$ , double  $u$ , double  $x[]$ , double  $y[]$ , double  $b[]$ , double  $c[]$ , double  $d[]$  )` `[static]`

Integrate the cubic spline function

$S(xx) = y[i] + b[i] * w + c[i] * w**2 + d[i] * w**3$  where  $w = u - x[i]$  and  $x[i] \leq u \leq x[i+1]$

The integral is zero at  $u = x[0]$ .

If  $u < x[0]$  then  $i = 0$  segment is extrapolated. If  $u > x[n-1]$  then  $i = n-1$  segment is extrapolated.

**Parameters**

in	$n$	the number of data points or knots ( $n \geq 2$ )
in	$u$	the abscissa at which the spline is to be evaluated
in	$x[]$	the abscissas of the knots in strictly increasing order
in	$y[]$	the ordinates of the knots
in	$b$	array of spline coefficients computed by <a href="#">spline()</a> .
in	$c$	array of spline coefficients computed by <a href="#">spline()</a> .
in	$d$	array of spline coefficients computed by <a href="#">spline()</a> .

**Returns**

the value of the spline function at  $u$

**Notes**

- If  $u$  is not in the same interval as the previous call then a binary search is performed to determine the proper interval.

Definition at line 324 of file `spline.c`.

**8.6 src/symbolic\_functions.c File Reference**

definition of symbolic functions

### 8.6.1 Detailed Description

This file contains definitions of various symbolic functions which

### 8.6.2 Macro Definition Documentation

#### 8.6.2.1 `#define TRUE 1`

bool return value true

Definition at line 16 of file symbolic\_functions.c.

#### 8.6.2.2 `#define FALSE 0`

bool return value false

Definition at line 18 of file symbolic\_functions.c.

### 8.6.3 Function Documentation

#### 8.6.3.1 `double amilog ( double x )`

c implementation of log function, this prevents returning NaN values for negative values

##### Parameters

$x$	argument
-----	----------

##### Returns

if( $x > 0$ ) then  $\log(x)$  else  $-\text{Inf}$

Definition at line 28 of file symbolic\_functions.c.

#### 8.6.3.2 `double heaviside ( double x )`

c implementation of matlab function heaviside

## Parameters

$x$	argument
-----	----------

## Returns

if( $x > 0$ ) then 1 else 0

Definition at line 43 of file symbolic\_functions.c.

Here is the caller graph for this function:

8.6.3.3 double sign ( double  $x$  )

c implementation of matlab function sign

## Parameters

$x$	argument
-----	----------

## Returns

0

**Type:** double

Definition at line 58 of file symbolic\_functions.c.

8.6.3.4 double am\_min ( double  $a$ , double  $b$  )

c implementation of matlab function min

## Parameters

$a$	value1 <b>Type:</b> double
$b$	value2 <b>Type:</b> double

## Returns

if( $a < b$ ) then  $a$  else  $b$

**Type:** double

Definition at line 78 of file symbolic\_functions.c.

8.6.3.5 `double Dam_min ( int id, double a, double b )`

parameter derivative of c implementation of matlab function min

## Parameters

<i>id</i>	argument index for differentiation
<i>a</i>	bool1 <b>Type:</b> double
<i>b</i>	bool2 <b>Type:</b> double

## Returns

id == 1: if(a < b) then 1 else 0

**Type:** double

id == 2: if(a < b) then 0 else 1

**Type:** double

Definition at line 92 of file symbolic\_functions.c.

8.6.3.6 double am\_max ( double *a*, double *b* )

c implementation of matlab function max

## Parameters

<i>a</i>	value1 <b>Type:</b> double
<i>b</i>	value2 <b>Type:</b> double

## Returns

if(a > b) then a else b

**Type:** double

Definition at line 116 of file symbolic\_functions.c.

8.6.3.7 double Dam\_max ( int *id*, double *a*, double *b* )

parameter derivative of c implementation of matlab function max

## Parameters

<i>id</i>	argument index for differentiation
<i>a</i>	bool1 <b>Type:</b> double
<i>b</i>	bool2 <b>Type:</b> double

## Returns

id == 1: if(a > b) then 1 else 0

**Type:** double

id == 2: if(a > b) then 0 else 1

**Type:** double

Definition at line 130 of file symbolic\_functions.c.

8.6.3.8 double spline3 ( double *t*, double *t1*, double *p1*, double *t2*, double *p2*, double *t3*, double *p3*, int *ss*, double *dudt* )

spline function with 3 nodes

**Parameters**

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

**Returns**

spline(*t*)

Definition at line 162 of file symbolic\_functions.c.

Here is the call graph for this function:

**8.6.3.9** `double spline_pos3 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, int ss, double dudt )`

positive spline function with 3 nodes

**Parameters**

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

spline(t)

Definition at line 203 of file symbolic\_functions.c.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.6.3.10** `double spline4 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, int ss, double dudt )`

spline function with 4 nodes

## Parameters

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

spline(t)

Definition at line 251 of file symbolic\_functions.c.

Here is the call graph for this function:

**8.6.3.11** `double spline_pos4 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, int ss, double dudt )`

positive spline function with 4 nodes

#### Parameters

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

#### Returns

`spline(t)`

Definition at line 295 of file `symbolic_functions.c`.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.6.3.12** `double spline5 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, int ss, double dudt )`

spline function with 5 nodes

Parameters

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

Returns

spline(*t*)

Definition at line 347 of file symbolic\_functions.c.

Here is the call graph for this function:

**8.6.3.13** `double spline_pos5 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, int ss, double dudt )`

positive spline function with 5 nodes

## Parameters

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

spline(t)

Definition at line 395 of file symbolic\_functions.c.

Here is the call graph for this function:

Here is the caller graph for this function:

8.6.3.14 `double spline10 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, double t6, double p6, double t7, double p7, double t8, double p8, double t9, double p9, double t10, double p10, int ss, double dudt )`

spline function with 10 nodes

## Parameters

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>t6</i>	location of node 6
<i>p6</i>	spline value at node 6
<i>t7</i>	location of node 7
<i>p7</i>	spline value at node 7
<i>t8</i>	location of node 8
<i>p8</i>	spline value at node 8
<i>t9</i>	location of node 9
<i>p9</i>	spline value at node 9
<i>t10</i>	location of node 10
<i>p10</i>	spline value at node 10
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

spline(*t*)

Definition at line 459 of file symbolic\_functions.c.

Here is the call graph for this function:

8.6.3.15 `double spline_pos10 ( double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, double t6, double p6, double t7, double p7, double t8, double p8, double t9, double p9, double t10, double p10, int ss, double dudt )`

positive spline function with 10 nodes

## Parameters

<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>t6</i>	location of node 6
<i>p6</i>	spline value at node 6
<i>t7</i>	location of node 7
<i>p7</i>	spline value at node 7
<i>t8</i>	location of node 8
<i>p8</i>	spline value at node 8
<i>t9</i>	location of node 9
<i>p9</i>	spline value at node 9
<i>t10</i>	location of node 10
<i>p10</i>	spline value at node 10
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

spline(t)

Definition at line 527 of file symbolic\_functions.c.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.6.3.16** `double Dspline3 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, int ss, double dudt )`

parameter derivative of spline function with 3 nodes

#### Parameters

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

#### Returns

`dspline(t)dp(id)`

Definition at line 588 of file `symbolic_functions.c`.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.6.3.17** `double Dspline_pos3 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, int ss, double dudt )`

parameter derivative of positive spline function with 3 nodes

## Parameters

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

dspline(t)dp(id)

Definition at line 633 of file symbolic\_functions.c.

Here is the call graph for this function:

**8.6.3.18** `double Dspline4 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, int ss, double dudt )`

parameter derivative of spline function with 4 nodes

## Parameters

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>ss</i>	flag indicating whether slope at first node should be user defined

<i>dudt</i>	user defined slope at first node
-------------	----------------------------------

**Returns**

dspline(t)dp(id)

Definition at line 676 of file symbolic\_functions.c.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.6.3.19** double Dspline\_pos4 ( int *id*, double *t*, double *t1*, double *p1*, double *t2*, double *p2*, double *t3*, double *p3*, double *t4*, double *p4*, int *ss*, double *dudt* )

parameter derivative of positive spline function with 4 nodes

**Parameters**

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4

<i>p4</i>	spline value at node 4
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

**Returns**

dspline(t)dp(id)

Definition at line 725 of file symbolic\_functions.c.

Here is the call graph for this function:

8.6.3.20 `double Dspline5 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, int ss, double dudt )`

parameter derivative of spline function with 5 nodes

**Parameters**

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

## Returns

dspline(t)dp(id)

Definition at line 770 of file symbolic\_functions.c.

Here is the call graph for this function:

Here is the caller graph for this function:

**8.6.3.21** `double Dspline_pos5 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, int ss, double dudt )`

parameter derivative of positive spline function with 5 nodes

## Parameters

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5

<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

**Returns**

dspline(t)dp(id)

Definition at line 823 of file symbolic\_functions.c.

Here is the call graph for this function:

**8.6.3.22** `double Dspline10 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, double t6, double p6, double t7, double p7, double t8, double p8, double t9, double p9, double t10, double p10, int ss, double dudt )`

parameter derivative of spline function with 10 nodes

**Parameters**

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1
<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>t6</i>	location of node 6
<i>p6</i>	spline value at node 6
<i>t7</i>	location of node 7
<i>p7</i>	spline value at node 7
<i>t8</i>	location of node 8
<i>p8</i>	spline value at node 8

<i>t9</i>	location of node 9
<i>p9</i>	spline value at node 9
<i>t10</i>	location of node 10
<i>p10</i>	spline value at node 10
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

**Returns**

dspline(t)dp(id)

Definition at line 879 of file symbolic\_functions.c.

Here is the call graph for this function:

Here is the caller graph for this function:

8.6.3.23 `double Dspline_pos10 ( int id, double t, double t1, double p1, double t2, double p2, double t3, double p3, double t4, double p4, double t5, double p5, double t6, double p6, double t7, double p7, double t8, double p8, double t9, double p9, double t10, double p10, int ss, double dudt )`

parameter derivative of positive spline function with 10 nodes

**Parameters**

<i>id</i>	argument index for differentiation
<i>t</i>	point at which the spline should be evaluated
<i>t1</i>	location of node 1
<i>p1</i>	spline value at node 1

<i>t2</i>	location of node 2
<i>p2</i>	spline value at node 2
<i>t3</i>	location of node 3
<i>p3</i>	spline value at node 3
<i>t4</i>	location of node 4
<i>p4</i>	spline value at node 4
<i>t5</i>	location of node 5
<i>p5</i>	spline value at node 5
<i>t6</i>	location of node 6
<i>p6</i>	spline value at node 6
<i>t7</i>	location of node 7
<i>p7</i>	spline value at node 7
<i>t8</i>	location of node 8
<i>p8</i>	spline value at node 8
<i>t9</i>	location of node 9
<i>p9</i>	spline value at node 9
<i>t10</i>	location of node 10
<i>p10</i>	spline value at node 10
<i>ss</i>	flag indicating whether slope at first node should be user defined
<i>dudt</i>	user defined slope at first node

#### Returns

dspline(t)dp(id)

Definition at line 952 of file symbolic\_functions.c.

Here is the call graph for this function:

## 8.7 symbolic/am\_and.m File Reference

```
syms x y f = symfun(sym(cw_and(x, y)), [x y]); fun = f(a,b);
```

#### Functions

- mlhsInnerSubst< matlabtypesubstitute > [am\\_and](#) (matlabtypesubstitute a, matlabtypesubstitute b)
