

setAbsoluteToleranceQuadratures

setupB

applyTolerancesASA

```
graph LR; A[setAbsoluteToleranceQuadratures] --> C[applyTolerancesASA]; B[setupB] --> C;
```

The diagram illustrates the dependencies of the `applyTolerancesASA` function. It is represented as a rectangular box with a light gray fill and a black border. Two arrows, colored dark blue, point towards the left side of this box. The top arrow originates from the right side of the `setAbsoluteToleranceQuadratures` box, which is white with a black border. The bottom arrow originates from the right side of the `setupB` box, which is also white with a black border. The arrows converge towards the center of the `applyTolerancesASA` box, indicating that both functions are prerequisites for its execution.
