

setAbsoluteToleranceQuadratures

setupB

applyTolerancesASA

```
graph LR; A[setAbsoluteToleranceQuadratures] --> C[applyTolerancesASA]; B[setupB] --> C;
```

The diagram illustrates the dependencies of the 'applyTolerancesASA' function. It is represented as a rectangular box with a gray fill and a black border. Two arrows, colored dark blue, point towards this box from the left. The top arrow originates from a white rectangular box labeled 'setAbsoluteToleranceQuadratures'. The bottom arrow originates from a smaller white rectangular box labeled 'setupB'. The arrows converge on the left side of the 'applyTolerancesASA' box, indicating that both functions are prerequisites for its execution.
